Tall Plate Door Hardware Installation Instructions

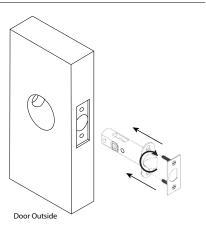

Note: Passages and privacies for doors 1-3/8" to 2" thick

Tools Required: Drill, 1/4" drill bit, #2 Phillips screwdriver

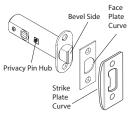

Install latch, and rotate latch tongue to change handing. (See panel C below)

Screw extender

Bevel side of latch tongue should contact curved end of face plate, and curved end of strike plate.

Door Inside

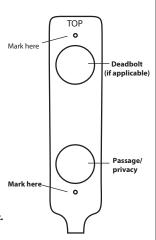

IMPORTANT: The privacy pin hub with threads goes on the inside of the door so it can accept the privacy pin.

Use the included universal drilling template to mark the mounting holes.

For passage/privacy locks, insert the bottom "cup" only, making sure the template is vertical. Mark the bottom mounting hole as shown, then flip the template over (so the "cups" are facing out.) Align the bottom drilling hole in the template with your mark. This will position the template so you can mark the top mounting hole.

Drill the mounting holes through the door using a 1/4" drill bit.

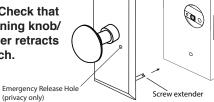

1) Install the 2 screw extenders into the exterior **Tall Plate**

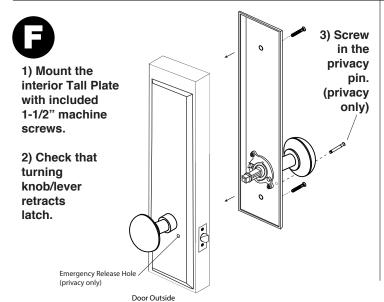

2) Mount the **Exterior Tall Plate**

3) Check that turning knob/ lever retracts latch.

(privacy only)

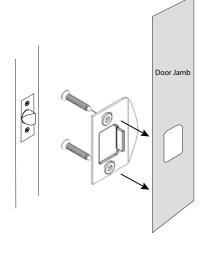

Door Outside

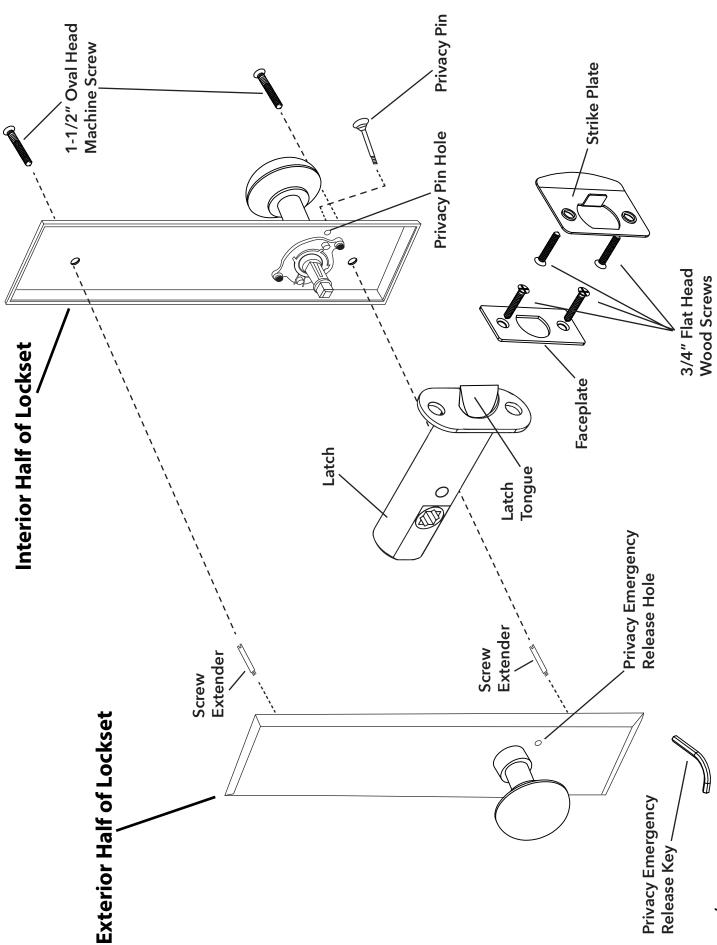

Attach the strike plate to the door jamb using 3/4" long wood screws.
